Summary

Computer Science undergraduate at VIT Vellore focused on building secure and scalable software systems. Experience across backend, mobile, and edge platforms with real-world deployments involving cybersecurity, machine learning, and blockchain technologies. Strong foundation in application development, system design, and core computer science principles and distributed computing architectures.

Education

Vellore Institute of Technology

B.Tech in Computer Science specializing in Blockchain Technology

Vellore, Tamil Nadu
2023 – 2027 | CGPA: 8.5

Delhi Public School, Varanasi

Class XII (CBSE) 84.4% (2022) | Class X (CBSE) 93.2% (2020)

Varanasi, India

Experience

K12 Techno Services

May 2025 – July 2025 | Bengaluru, India

App Developer Intern

- Built production Flutter applications integrated with Django REST APIs serving 1,000+ users; reduced API latency by 30% through query optimization, indexing, and caching.
- Engineered JWT authentication and RBAC authorization while implementing WebSocket-based real-time synchronization for 1,000+ users, reducing refresh latency by 40%.

The WhiteHats Club

VIT Vellore

Founding Board & Vice Chairperson

Jan 2025 – Dec 2025

- Led a 100+ member technical community; architected CTF infrastructure, organized a national hackathon, and mentored members in ML pipelines, secure coding practices, and distributed system design.

Secretary

Jan 2026 – Present

- Managed operations and budget allocation for 10+ technical events, optimizing financial planning and reducing operational overhead while maintaining structured technical documentation and reporting.

Projects

CITADEL Secure Military Communication System (Hackathon Winner)

2026

Built a tamper-resistant battlefield communication framework enabling encrypted distributed node transmission. Implemented AES-256 + ECC hybrid encryption with blockchain-based validation and ESP32 hardware integration, preventing replay and tampering attacks.

RePlate FMCG Supply Chain Optimization

2026

Developed an ML-driven demand forecasting and logistics monitoring platform, reducing inventory mismatch by 22%. Built predictive models with scalable backend services for multi-location warehouse tracking and real-time stock aggregation.

Travelink MERN Student Travel Networking Platform

2025

Built a full-stack web application connecting college students to coordinate and share travel plans. Designed MongoDB schemas and REST APIs handling 5k+ daily requests with a secure Node.js backend and JWT-based authentication.

Nimbus Sportsperson Profile & Social Application

2026

Built a Flutter-based athlete networking platform supporting profile management, social feeds, and event tracking. Integrated Firebase authentication and a Node.js backend with real-time updates enabling concurrent user interactions.

Fruit Ripeness Detection System (Hackathon Winner)

2025

Created an edge-AI fruit quality classification system for automated supply chain assessment. Trained YOLOv8, achieving 92% mAP on a 10k+ dataset, and deployed a TensorFlow Lite model on Raspberry Pi with a Flutter analytics dashboard.

Achievements & Certifications

Yantra Central Hack Winner 2025 AI/ML Developer

Yantra Central Hack Winner 2026 Team Lead | Cybersecurity + Blockchain Developer

LOR - Click Here | Flutter Certification - Angela Yu | AI/ML Certification - Kirill Ereminko

Technical Skills

Languages & Frameworks: Python, C++, JavaScript, Dart, SQL, Flutter, Django, React, Node.js, Solidity

Technologies & Tools: Distributed Systems, REST APIs, WebSockets, Blockchain, Machine Learning, Git, Linux, MongoDB, PostgreSQL, Raspberry Pi, ESP32
